

Minimally Invasive Therapy for Prostate Cancer

Attend an free information session learn about the latest, minimally invasive treatment options for prostate cancer including high intensity focused ultrasound, or HIFU.

Sonablate® HIFU is a minimally invasive therapy for localized prostate cancer that uses ultrasound waves to destroy tissue in the prostate using heat.

HIFU is...

Non Surgical.

Radiation Free.

A one time procedure, in most cases.

An outpatient procedure.

Quality of Life

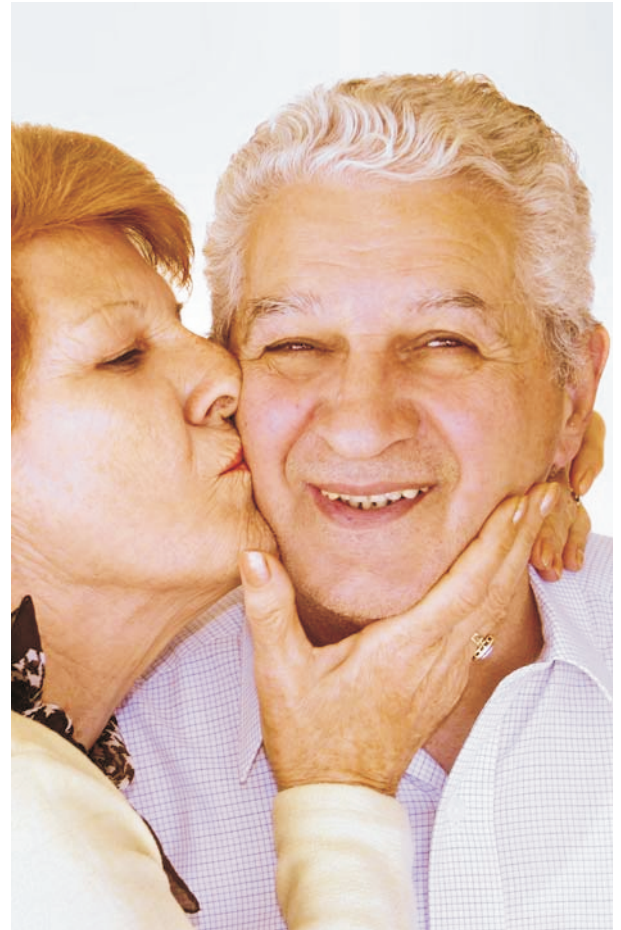

A study outside the US reports low rates of impotence and incontinence.

Primary & Salvage Therapy

A therapy option for prostate cancer that may also be used as salvage therapy when other options have failed.

For more information visit:
